Flathub

An App Store and Build Service
for Flatpak Applications

Robert McQueen
ramcq@gnome.org

Jorge García Oncins
jgarciao@gmail.com

July 7, 2018 Almería

About us

Robert McQueen

- VP of Platform at Endless, previously CTO & Co-Founder at Collabora
- Flathub sysadmin & Flatpak contributor
- Just elected to GNOME Foundation board

About us

Jorge García Oncins

- Software Engineer based in Barcelona (Java, Spring, Angular, ...)
- Longtime Linux user
- Contributing to Flatpak/Flathub for the last 2 years (flathub.org website, documentation, ideas, ...)

About Flathub

About Flathub - What is Flathub?

MISSION

Provide a central place to get, build and distribute apps that can run safely in a sandboxed environment, on almost any Linux distribution and CPU architecture, utilizing Flatpak technology.

About Flathub - What is Flathub?

OPPORTUNITIES

Independent app distribution for Linux, providing an app platform where developers can automatically build and publish their apps and users can install them on any distro within minutes.

About Flathub - What is Flathub?

AREAS OF COLLABORATION

- App packaging and testing
- Web development
- Documentation
- Public relations

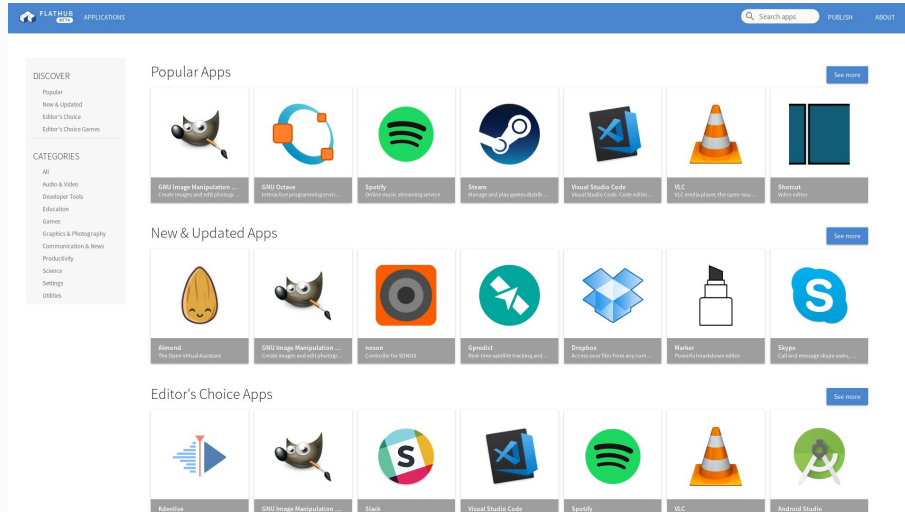

About Flathub - What is Flathub?

SKILLS REQUIRED

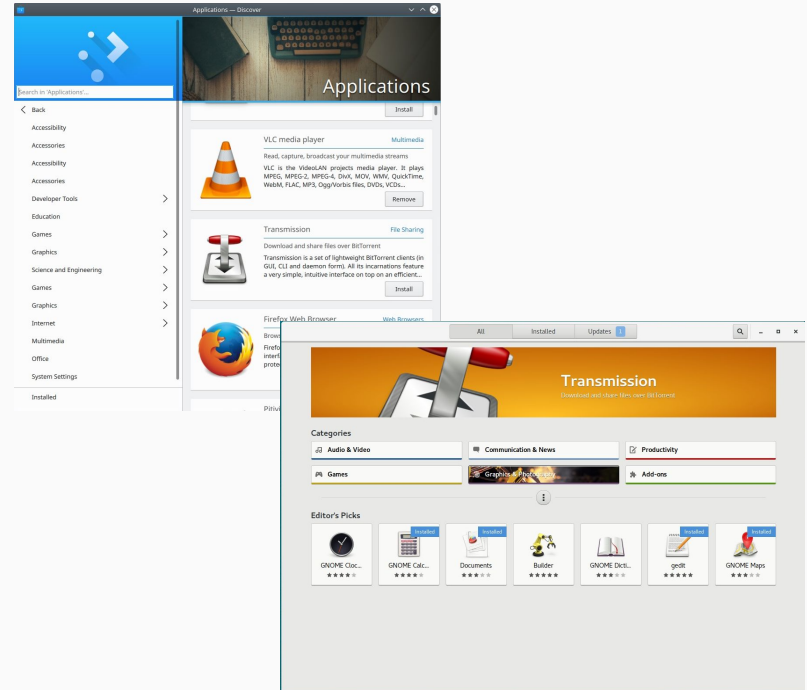

- Upstream app developers!
- Programming (flathub.org website, flatpak, ...)
- Infrastructure/ops
- App packaging
- Web content, bug triage, translations, ...

About Flathub - How does it look?

Flathub website

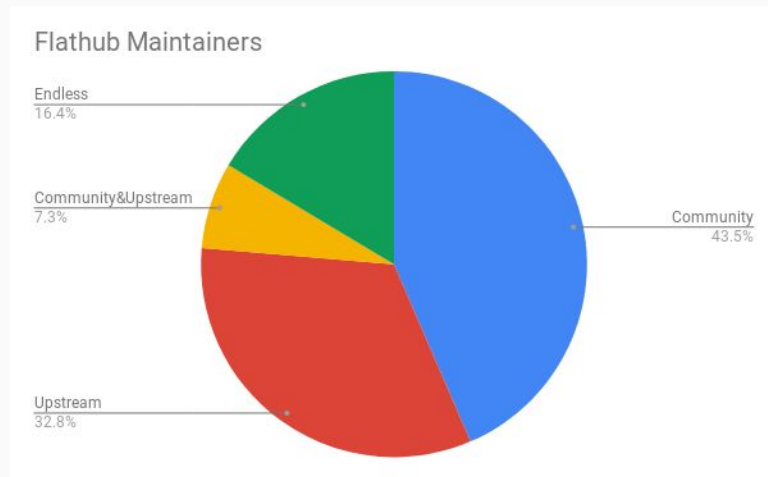

Flathub integrated in app centers

Flathub is a community project

- Driven by a wide range of individuals
- **21 individuals** provided some money for infrastructure expenses (June 2017)
- Currently **208 contributors** to github.com/flathub/app repos!
- Flathub reviewers team: **5 people**
- Flathub website team: **5 people**

About Flathub - Who is running Flathub?

Companies donating services:

- Codethink
- Fastly
- Mythic Beasts
- Packet
- Prerender.io
- Scaleway

Companies donating time:

- Codethink
- Endless
- RedHat
- ... and many apps!

Prototype buildbot
First website
Fundraise for production infra

Endless OS enables Flathub
Joined by Linux Mint
LibreOffice 6

New website released

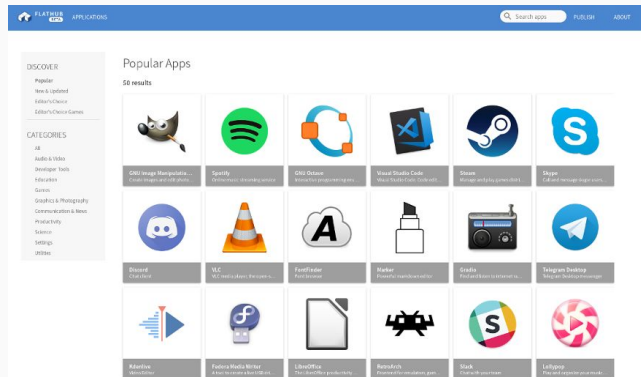

Official launch at GUADEC
Downloaders: Steam, Spotify, Discord
App list on webpage

New beta website

Flathub for Users & Developers

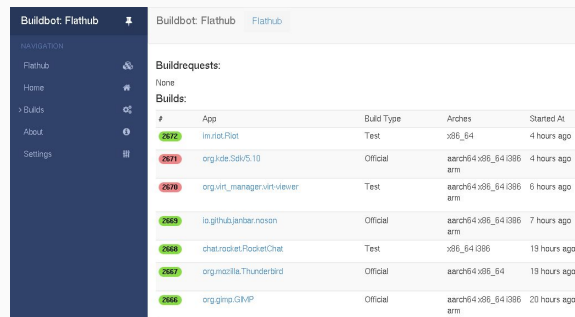

Flathub for end users

- App store: apps, themes, runtimes
- Browse apps with the website or using Gnome Software/KDE Discover
- Flatpak benefits vs standard distro packages:
 - Get the experience from the app developer
 - Up-to-date versions regardless of distro
 - Easy and efficient updates
 - Sandboxing

Flathub for developers - Features

- Single point of entry for distributing apps on the most popular Linux distributions
- Apps run **exactly as you build/configure them**
- A growing number of users:
 - some Linux distributions enabling it by default (Endless OS, Linux Mint)
 - simple setup steps for those that don't
- Build service: reproducible builds, multiple archs (x86_64, i386, arm, aarch64)

The screenshot shows the Buildbot: Flathub web interface. On the left is a dark sidebar with navigation links: Buildbot, Flathub, Home, About, and Settings. The main content area has a header with 'Buildbot: Flathub' and 'Flathub' tabs. Below the header, it says 'Buildrequests: None' and 'Builds:'. A table lists recent builds with columns for #, App, Build Type, Archs, and Started At.

#	App	Build Type	Archs	Started At
2670	im-not-Plot	Test	x86_64	4 hours ago
2671	org.fde.Solv5.10	Official	aarch64:x86_64:arm	4 hours ago
2670	org.virt_manager.virt-viewer	Test	aarch64:x86_64:arm	6 hours ago
2669	io.github.janbar.noxon	Official	aarch64:x86_64:arm	7 hours ago
2668	chat.rocket.RocketChat	Test	x86_64:arm	13 hours ago
2667	org.mozilla.Thunderbird	Official	aarch64:x86_64	13 hours ago
2666	org.gimp.GIMP	Official	aarch64:x86_64:arm	20 hours ago

Publish and update an app in Flathub

- Before publishing
- Publish
- Update

Things to do before publishing a new app in Flathub

Checklist

Flatpak workshop
with Alex Larsson
Monday 9th am

- Check if it's published already or already a work in progress
- Check app requirements (License, AppId, Desktop integration, permission, ...)
- If you are not the app developer contact the author first to ask them to submit it or offer your help
- Write your Flatpak manifest
 - Runtimes: freedesktop.org, GNOME and KDE
 - Shared modules: save time building common dependencies

- 1) Fork the Flathub repository on GitHub
- 2) Clone the fork: `git clone --branch=new-pr git@github.com:your_github_username/flathub.git`
- 3) Create a new branch with your app's name: `git checkout -b your_app_name`
- 4) Add your app's manifest to the branch, commit it and push the commit
- 5) Open a pull request against the new-pr branch on Github
- 6) Your pull request will then be reviewed by the Flathub reviewers

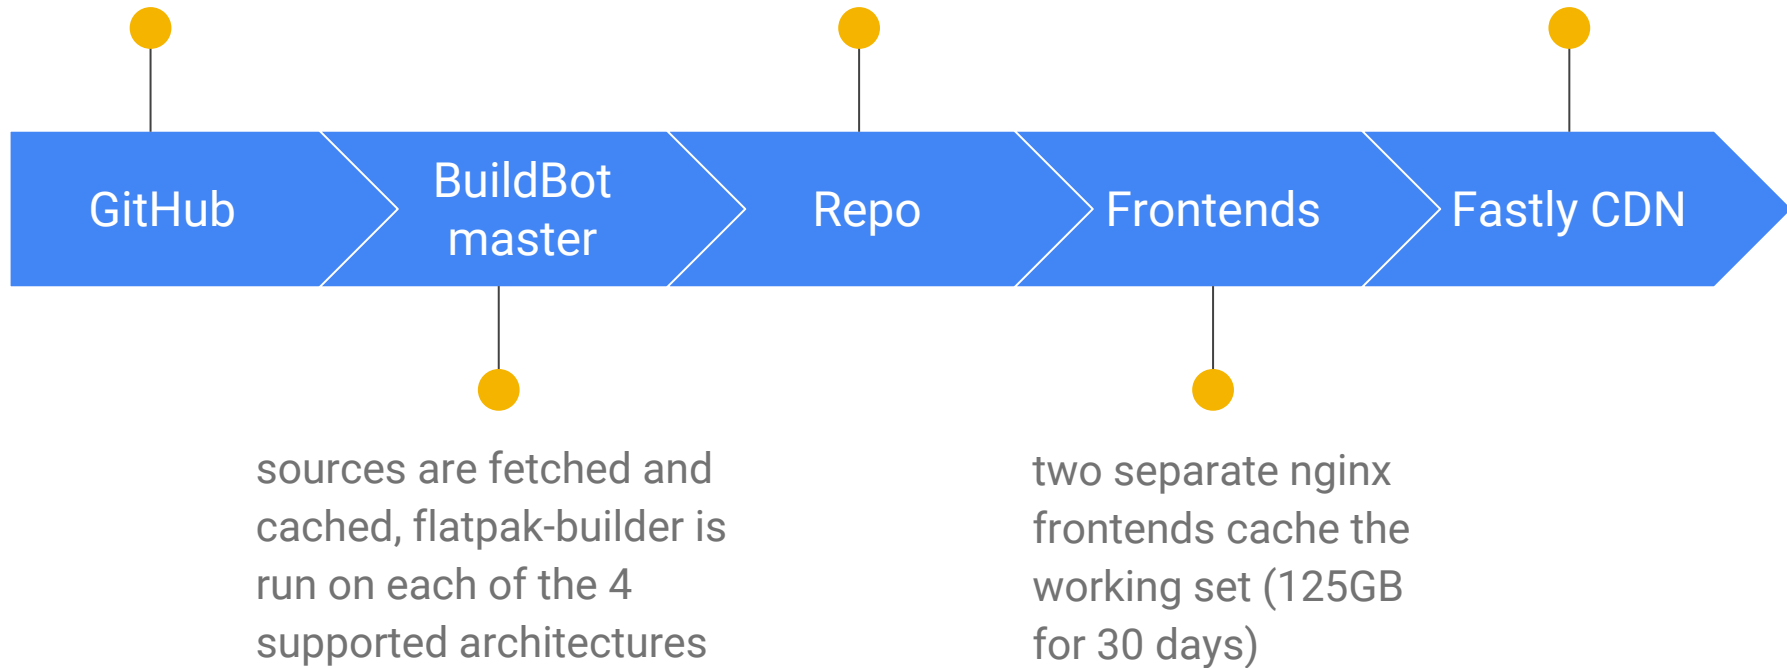

- Once your pull request has been approved, a new repository will be created for your application, containing your app's flatpak manifest
- You will have write access for the repository
- The Flathub service then uses the manifest from your repository to continuously build and distribute your application on every commit.

How does Flathub work?

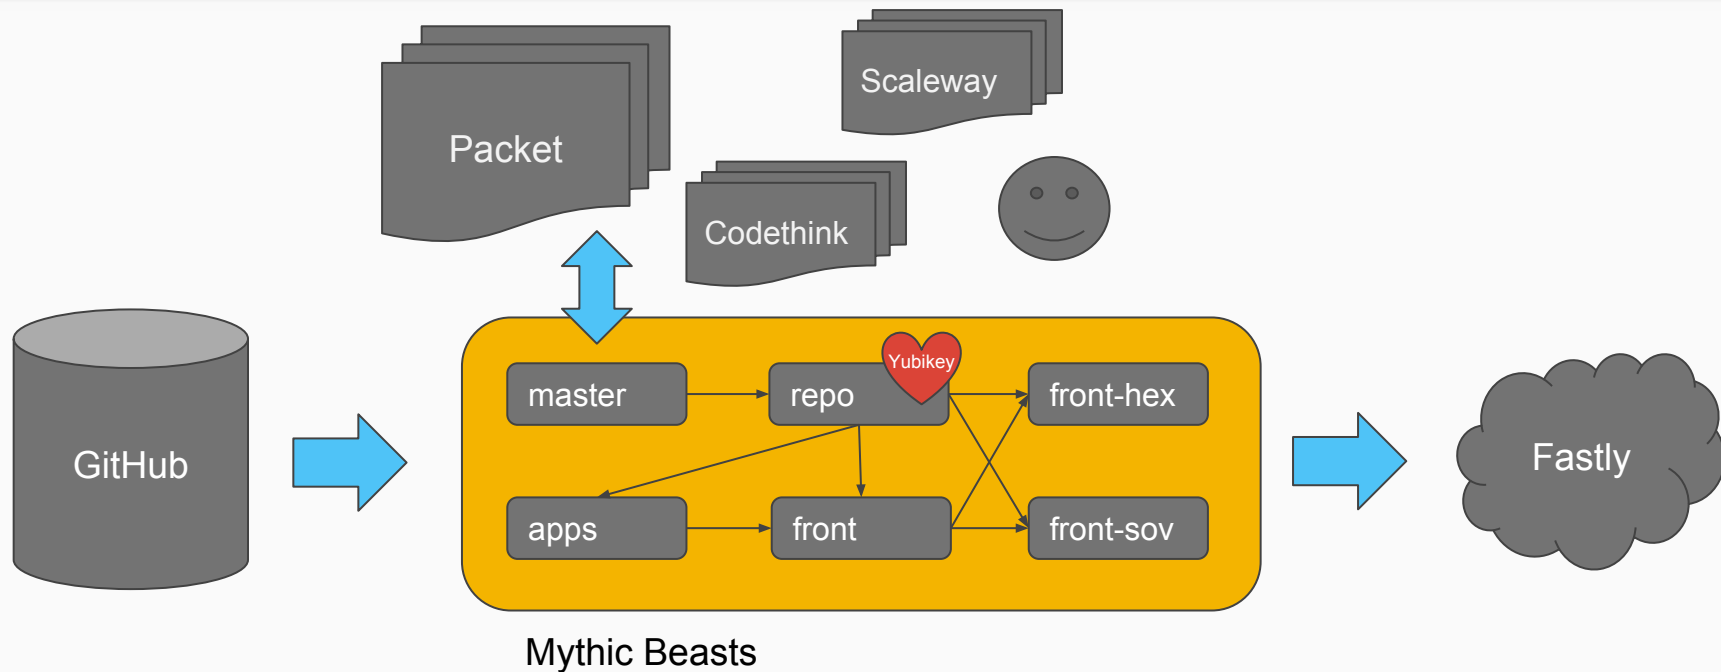

pushes to each app repo
are notified to BuildBot
with a web hook

builds are committed to
the central repo (283GB),
GPG-signed with a
YubiKey HSM

we serve 3.7TB per
day from 50 edge
nodes

Infrastructure

Future developments

What plans are there for future development?

- Closer support from the GNOME Foundation, full-time dev/ops, sharing infrastructure
- flathub.org improvements: i18n, ratings, reviews, stats, search by license/arch/rating, show app extensions, ...
- Support for beta/scratch builds
- Infrastructure improvements: better build system, staging server, scaling!

How can I contribute
to Flathub?

Contributing to Flathub

- **As a user:** use it, enjoy the apps, tell your friends, tweet about it, report issues.
- **As a developer:** publish (and update) your apps & themes at Flathub
- **As a company:** become an sponsor
