Building a Flatpak based App Store

Jorge García Oncins
jgarciao

Who am I?

Java Backend Software engineer

Linux User for a long time

Recently involved in open source as a contributor

This is my first GUADEC

This is my first talk!

Flathub (present)

Right now, it is focused on developers:

- Service to build apps for different architectures
- Apps can be discovered in gnome-software & KDE Discover

Flathub (still needed, in my opinion)

Provide a web application (browser based):

- Discover apps, themes & other stuff
- Build a community of users & developers:
  - Reviews
  - Questions & Answers
- Provide a way for users to buy/help open source projects
  - Purchases
  - Donations
- Same for closed source apps (in my opinion)

LinuxStore: proof of concept

Personal project

- Source code on https://github.com/jgarciao/linux-store-frontend

- Demo at http://45.55.104.129/apps

LinuxStore: proof of concept

What do you think?

Open debate (talk and earn points!)

LinuxStore: proof of concept

Thank you!
